

Metro Sphere Glass Pendant Lamp

1

Insert the rod and disc

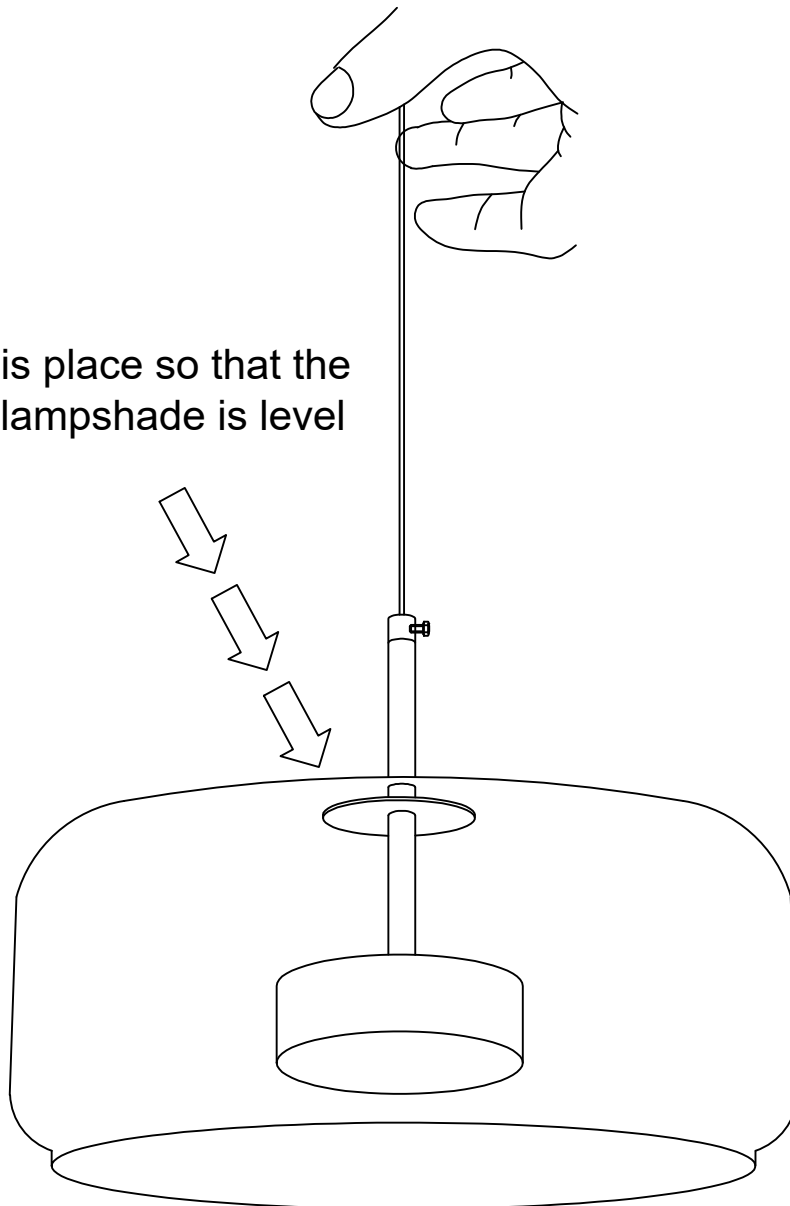

Insert the glass and fix it with the round tube above

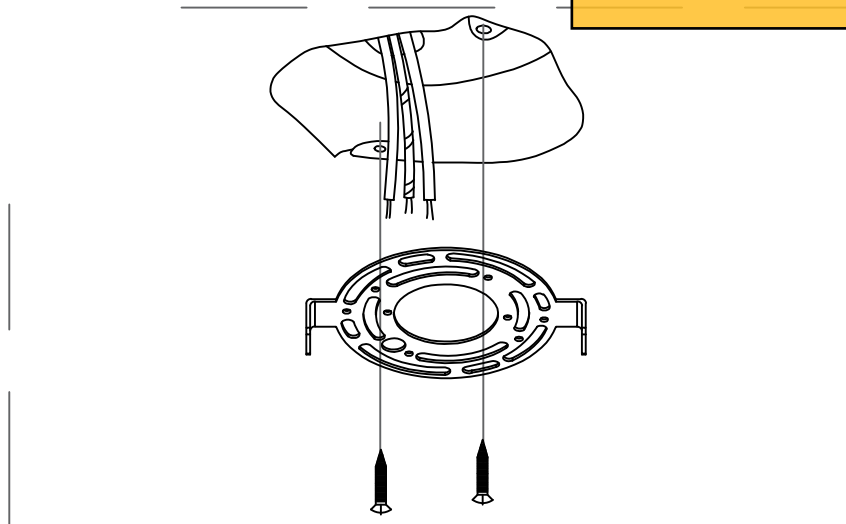

2 This is a blown glass lampshade, and due to its handcrafted nature, it must be carefully aligned horizontally before installing the lamp. If the lamp appears crooked, please first adjust the top disc fitting to ensure it is securely fastened. Then, gently rotate and position the glass shade to achieve a level, horizontal alignment. Only after confirming the proper angle should you proceed with the final installation. Please pay close attention to this step, as improper installation can cause the lamp to hang unevenly and may give the false impression of a defect.

Notice:

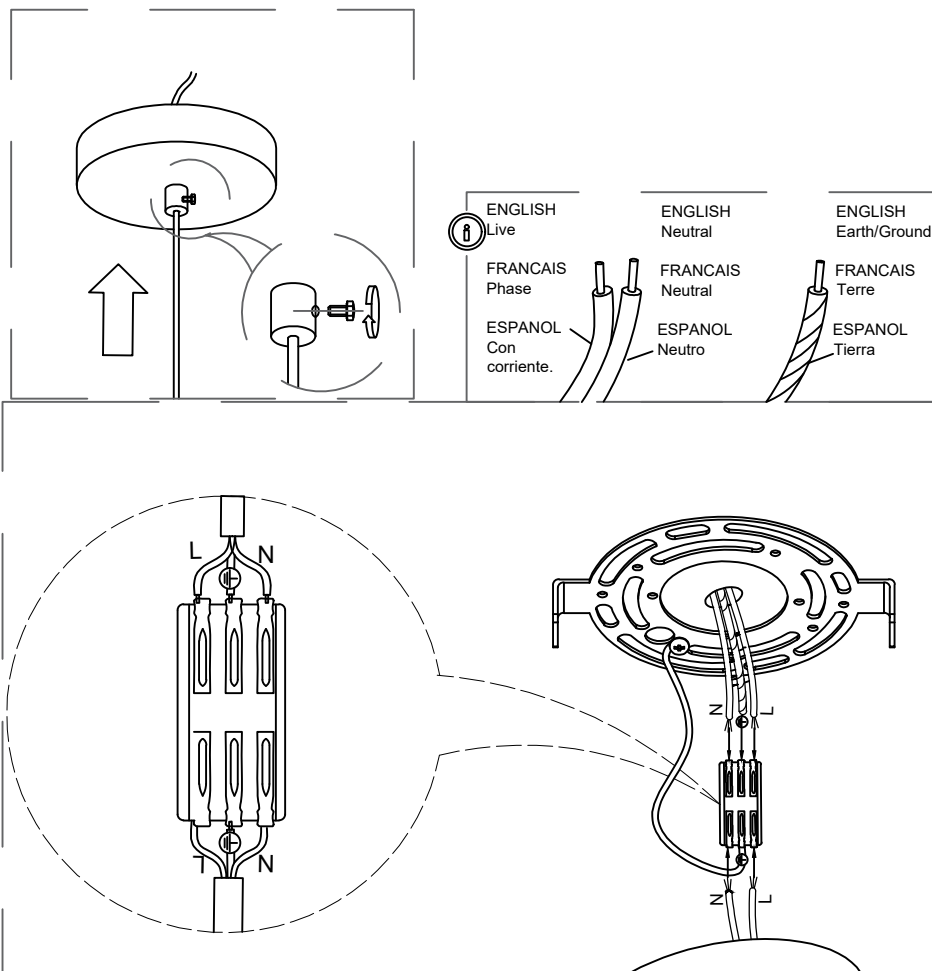

Adjust this place so that the installed lampshade is level

3

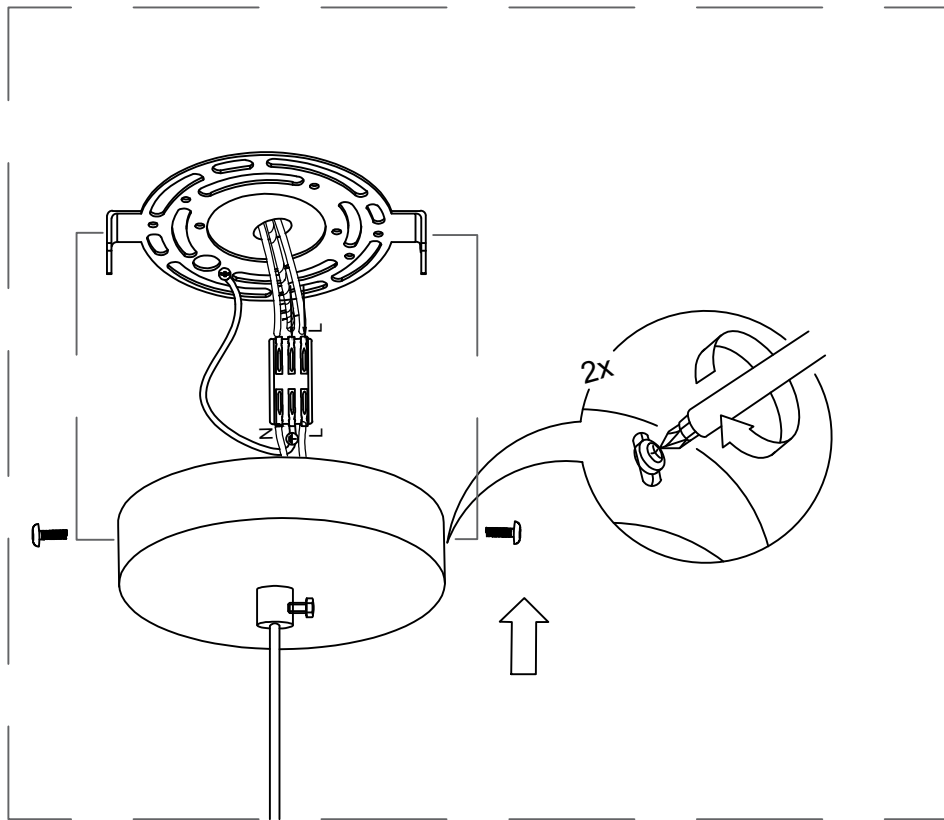

Fasten the hanging board to the ceiling with screws

The wires in the home are connected to the wires in the lamps through the wire terminals

4

The side screws fix the lamp body to the ceiling plate
